Topic 11 – HTTP Request Node

n8n Hands-On Beginner Course | Workflow Execution Evidence

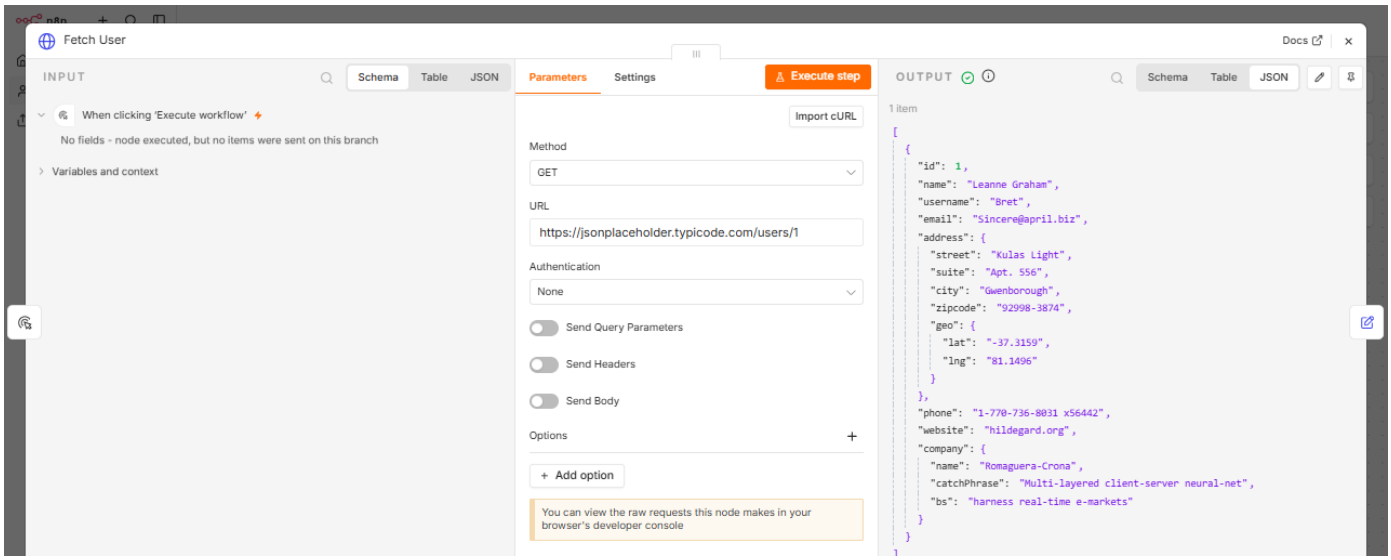

1. Complete Workflow Execution

All four nodes have green checkmarks. The flow runs from the Manual Trigger through GET, payload preparation, and POST.

2. GET Request – Fetch User

The Fetch User node calls the public JSONPlaceholder users/1 endpoint using GET and returns Leanne Graham's profile as structured JSON.

3. POST Request – Send Custom Post

The POST node submits JSON data to the JSONPlaceholder posts endpoint and receives a mock response with ID 101. The visible title and body contain the unprefixed name and email.
