# Topic 7 – Schedule Trigger

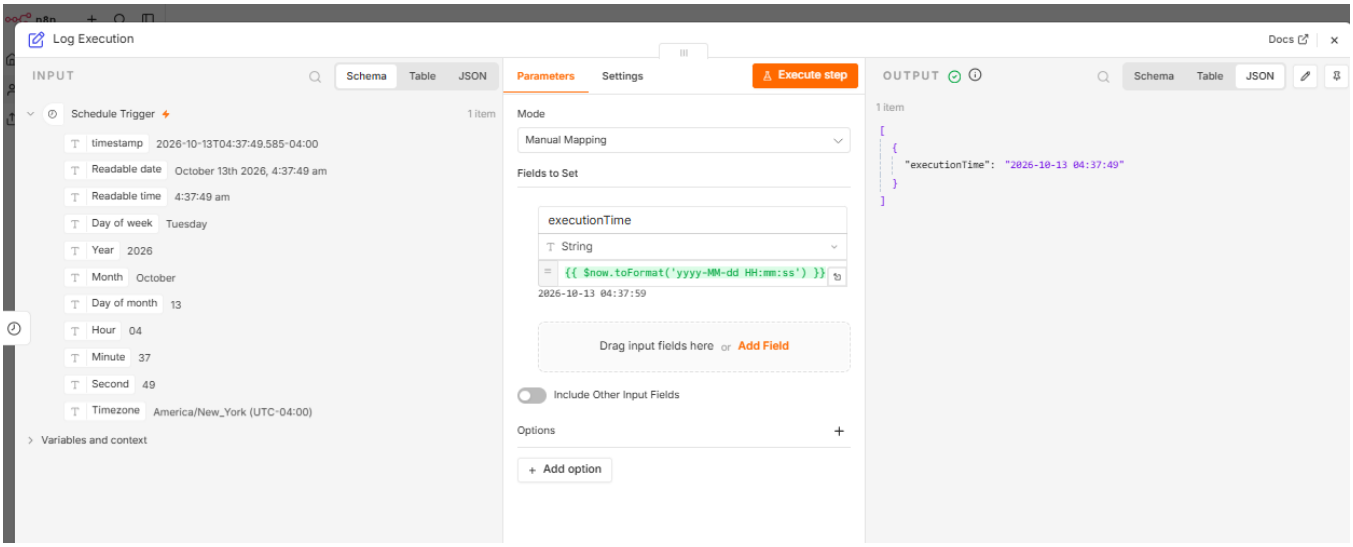

N8N Hands-On Beginner Course | Workflow Execution Evidence

## 1. Workflow Execution

The Schedule Trigger and Log Execution nodes are connected and display green success indicators. The canvas shows one item passed through the workflow.

## 2. Dynamic Timestamp Capture

The Log Execution node uses a dynamic current-time expression to populate executionTime. Its output shows a generated timestamp, and the node reports successful execution.

## Evidence note

These screenshots demonstrate the manual test and timestamp output. Daily and weekday schedule settings and automatic activation are not visible in the supplied evidence.
