N8N Topic 2 - Workflow Execution & Debugging Evidence

N8N Hands-On Beginner Course | Topic 2

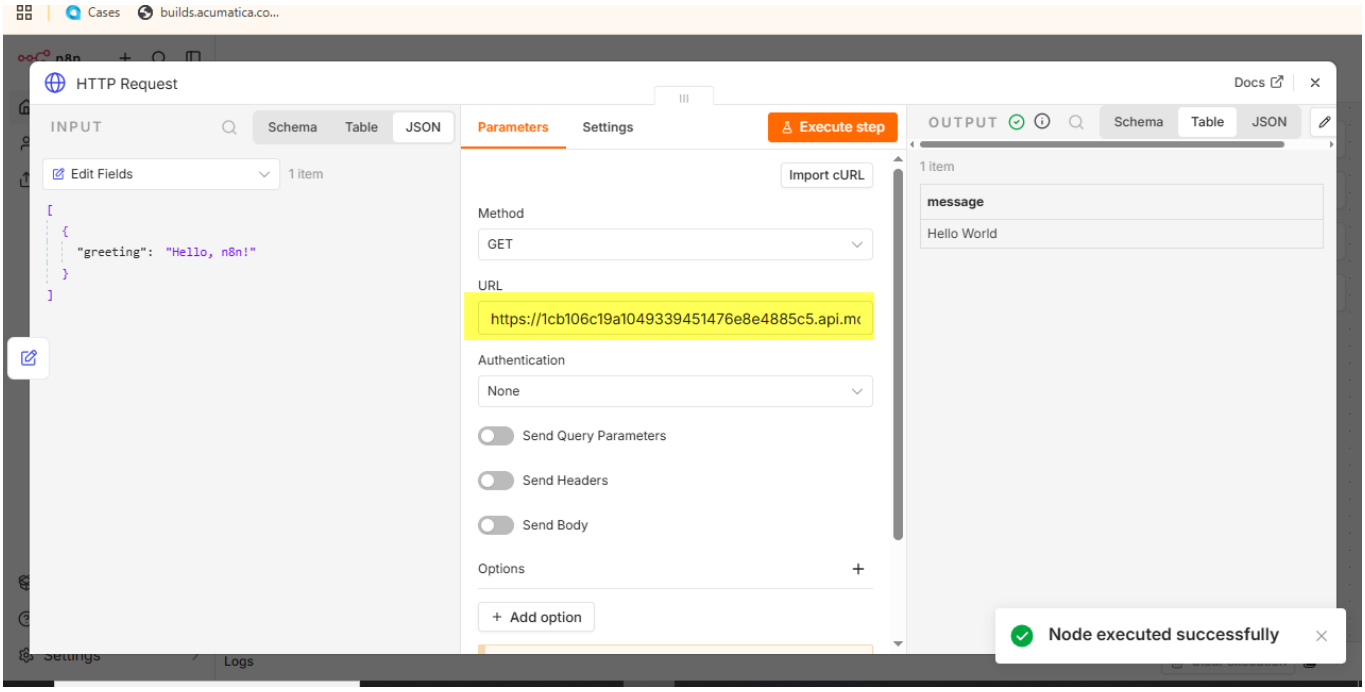

1. Intentional HTTP Request Failure

The Manual Trigger and Edit Fields nodes completed successfully. The HTTP Request node failed as intended and displayed a connection error caused by an incorrect/nonexistent host.

2. Corrected HTTP Request - Node Test

After updating the GET URL to the mock endpoint, the HTTP Request node executed successfully. The input JSON contains the greeting and the output table shows message: Hello World.

3. Successful Complete Workflow

The final workflow shows green checkmarks on Manual Trigger, Edit Fields, and HTTP Request, with one output item from the HTTP Request node.
